Esecuzione rastrematura partenze per accoppiare corrimano a caposaldo
Terminals tapering for matching handrail with the corresponding end post

LAMINATO A CALDO - HOT ROLLING

HEISS GEWALTSTES METALL - LAMINADO EN CALIENTE - LAMINE A CHAUD

É un'operazione di deformazione plastica (permanente), dove il ferro caldo, passando attraverso una successione di rulli assume la forma del profilo dei rulli stessi. Il ferro laminato a caldo è riconoscibile in quanto la sua superficie presenta uno strato di colore scuro (calamina) che protegge il ferro dalla ruggine.

It is a permanent plastic deformation process.

The hot iron passes through a series of rolls and gets the shape of the rolls themselves.

Cold rolled iron is characterised on its surface by a dark membrane called "calamine" which protects the iron from the rust.

Es handelt sich um einen dauerhaften plastischen Verformungsvorgang, bei dem das heisse Eisen durch eine Rollenserie geführt wird, und die Form der Profilen der Rollen annimmt. Das heissgewalzte Metall erkennt man an seiner dunkelfarbigen Oberfläche (Zunder) das es vor Rost schützt.

Es una operación de deformación plástica (permanente), donde el hierro caliente, pasando a través de una sucesión de rolos, toma la forma del perfil de los rolos mismos.

El hierro laminado en caliente puede ser reconocido en cuanto su superficie presenta una tela oscura (calamina) que protege el hierro del rojizo.

C'est un procédé de déformation plastique permanente pendant lequel le fer chaud, en passant à travers une succession de rouleaux, prend la forme du profil des rouleaux mêmes. On peut reconnaître le fer laminé à chaud pour une couche sur sa surface couleur foncée (calamine) qui protège le fer contre la rouille.
